

# You as a guest and our conscience!

It is not easy to offer you as a guest all the comfort you want and at the same time have as little impact on our environment as possible. As far as we can, we always strive to save energy, avoid waste and renaturalize! Help us in our efforts, thank you very much!

## What we have done so far:

### buildings

All our houses were not newly built but modernized to the highest standard. By renovating instead of building a new building, we were able to save around 2 million tons of CO<sub>2</sub>. This corresponds to 600,000 liters of heating oil.

### Operation

Each of our houses is equipped with a solar or photovoltaic system.

All lighting fixtures are LED lamps. We were able to reduce hot water consumption by 25% by reducing pressure. Our own energy production is 25%.

### Renaturation

After taking over the houses, we planted around 2,000 plants and renatured 300m<sup>2</sup> of concrete or asphalt.

### Operating resources

All our cleaning and detergents are computer-controlled and optimally dosed

## What you can do for our conscience:

### power consumption

Do not ventilate your room for too long and close the windows when you leave the room.

Do not leave the hot water running for too long before showering.

Use the hand and bath towels several times!

Food and drinks

Eat as much as you can and like, but please get lots of small portions and don't throw anything away.
